

Remote log

Remote Logger

Boomerang is the complete system for monitoring, “all-in-one”.

The Boomerang Remote Logger is excellent for monitoring, in places and locations where ordinary radio or fixed communication does not reach. The Remote Logger operates on GSM/GPRS mobile telephony network and over Internet (Ethernet 10/100Base-T LANs) .

Stay in charge of your measurements, wherever your equipment are..

Having Boomerang Remote Logger enables:

- Remote and proximity monitoring
- Full traceability
- Efficient reporting
- Complete documentation

...no worries, you're in charge!

Applications examples:

Temperature monitoring

Pharmacists having a several pharmacy stores in different places and cities, can use the Boomerang Remote Logger to monitor all refrigerators and freezers from one central location.

Diaries can monitor cooled warehouses located remotely from the main production plant.

Blood banks can monitor blood freezers located on other sites.

Level measuring

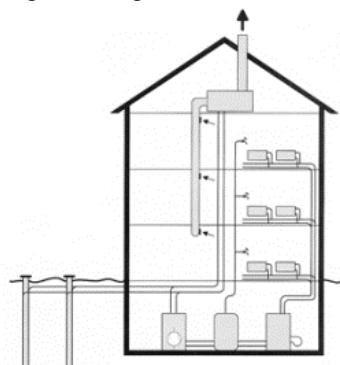

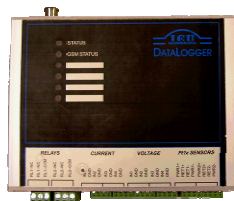

The Boomerang Remote Logger reports to a system that log, monitor against alarm levels and distribute alarms.

- Milk
- Water
- Oil

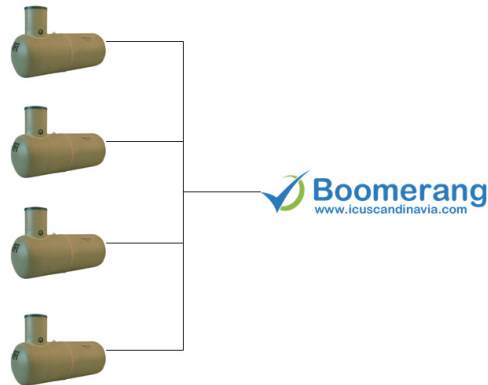

Temporary measuring

When installing new equipment the Remote Logger can be used for trimming and tuning the equipment. Example of equipment is heating, cooling or ventilation system that needs be tuned in for optimal operation. The Remote Logger is also suitable for measuring temperatures and humidity when constructing and renovating buildings.

All your Remote Loggers connected to *one* system

Following up is easy, by using the Boomerang built-in report function you will get reports for the period of your choice. Eg. the recent three weeks or May-to-September last year.

It easy to start logging with the Remote Logger

Configure the Remote log

Add and configure the Remote Logger to your Boomerang system

Set the alarm levels

Configure alarm distribution list (where to distribute the alarms)

Your application is configured and ready to start logging
